

SUHAIL — How It Works (Guide for Clients)

A clear walkthrough of how a school, institute, or counselor uses SUHAIL to bring students on board, guide them, and support their career decisions. Use this to understand the product, run a demo, and present it to prospective clients.

1. Who is involved (the three roles)

Role	Who it is	What they can do
Organization Admin	The school / institute / counseling business owner	Creates the org, adds students (one-by-one or via CSV), sends student invitations, assigns counselors, views billing
Counselor	The career counselor / mentor	Assigns career tests to students, reviews and edits each student's roadmap, adds their own steps
Student	The student / family	Sets up their own login, takes recommended tests, views their career matches and roadmap, checks progress

Tip for the demo: Everyone starts with sign-in at the login page. The org admin signs in first, then brings students in.

2. Setting up the organization (Org Admin)

A new organization starts with a trial.

- 1 On the website, the org admin clicks **"Start Trial" / "Get started"**.
- 2 They fill in:
 - Organization name
 - Contact name, email, and phone
 - Their own first name, last name, email, and password
- 1 An account is created with role **Org Admin** and a **14-day free trial**.
- 2 The admin immediately signs in at the login page with the email and password they just chose.

No email confirmation needed — the admin sets their own password at sign-up and can log in right away.

3. Adding students (Org Admin)

The org admin has a **Students** screen inside their dashboard. There are two ways to add students.

Option A — One student at a time (per student invite)

The admin can add a student and generate a personal invitation link for them.

Option B — Bulk import from a CSV file

- 1 Click **"Import CSV"**.
 - 2 Download the **sample CSV** template to see the required format.
 - 3 Fill in the students (first name, last name, email — and optionally phone, grade, and counselor email).
 - 4 Upload the file. The system checks for mistakes, duplicate emails, and that you're within your plan's student limit.
 - 5 Valid students are created instantly (up to 1,000 rows at a time).
- Imported students are created **active but with no password yet** — that's intentional. They get access by accepting their invitation (next step).

4. Giving students access (the invitation)

Students do **not** get a password handed to them. Instead, the org admin generates a secure invitation link and the student sets their own password.

- 1 From the Students screen, the admin clicks **"Invite"** next to a student.
- 2 A unique link is generated, e.g. `https://technology-platform.vercel.app/invite/abc123...``.
- 3 The admin copies the link and sends it to the student **through their own channel** (WhatsApp, email, phone, etc.). The platform does not send emails automatically.
- 4 The student opens the link — they're greeted by name — and sets their own password.
- 5 Their account is now ready. They sign in with their **email + the password they created**.

Important: Invitation links expire after **7 days**. If it expires, the admin simply clicks "Invite" again to make a fresh one. Emails are never part of the link itself — only the database knows the student's email.

■■ **Alternative:** Some schools choose **self-registration**. If enabled, students can sign up on their own at the register page (name, email, password), then log in immediately. The invitation method is the recommended one for controlled access.

5. Assigning a counselor to a student

From the Students screen, the admin assigns a counselor to each student using the counselor dropdown on the student's row. Once assigned, that counselor can manage the student's tests and roadmap.

6. Assigning career tests (Counselor)

Counselors assign **career assessments (tests)** to students. Students cannot assign tests to themselves.

- 1 The counselor opens the **Assign Test** screen (`/tests/assign``).
- 2 They pick a **student** and a **test type**:

Test	What it reveals
Stream Selector	Which stream (e.g. Science / Commerce / Arts) suits them
Ideal Career	Careers that fit their interests and strengths
Personality Type	MBTI-style profile (e.g. INTJ) and how they think
Multiple Intelligences	Their strongest learning/thinking styles
Learning & Productivity	How they learn and work best

- 1 They click **"Generate assignment"**.
- 2 A **permanent test link** is created — the counselor copies it and shares it with the student. (One link per test type per student.)
- 3 The student opens the link and takes the test. It can be answered in one sitting or in parts — progress is saved automatically, so the student can continue later.

■ ■ **Dedicated to clients:** Tests are not "leaked" as fixed tests; they are personalized links tied to each student's name. The counselor sees who has and hasn't started.

7. The report (after a test is finished)

When a student finishes a test:

- 1 The answer is validated against the real question bank (not trusted from the browser).
- 2 A **report is generated automatically** — scores, strengths, and (for personality) a type code with descriptions.
- 3 The student sees a clear visual report with bars and explanations.
- 4 A branded **PDF** can be downloaded (with the organization logo, student name, counselor name, and date) to share with parents or keep on file.
- 5 The student can **retake** the test — a fresh session is created and the previous result is kept.

Completing assessments makes the **career matches** richer. Since career recommendations are built from the signals assessment results feed in, the more tests a student completes, the more personalised their recommendations become.

8. The career roadmap (Student ↔ Counselor)

What the student sees

The **Roadmap** screen (`/roadmap``) turns the student's situation and test results into a step-by-step plan:

- A header showing their **Career Goal**, education stage (India vs Abroad), and a **progress percentage**.
- Steps grouped into milestones: **NOW**, **Next 3 Months**, **Next 6–12 Months**, **Target**.
- Each step has a title, priority (High/Medium/Low), and a description.
- A "**Try India / Try Abroad**" toggle to regenerate the plan for a different destination.
- Steps marked with a purple "Counselor" badge were added personally by the counselor.
- A "Next action" summary highlights the first thing to do right now.

What the student can do

- Mark steps **complete**, **skip** steps, or tap "**Why**" to see the reasoning behind a step.

What the counselor can do

From their student view, the counselor can:

- **Regenerate** the roadmap's future steps (optionally switching destination or career).
- **Add their own steps** with a personal note — these survive future regenerations and appear with a counselor badge.
- **Update** any step's status.

■■ **Key behavior:** Completed steps and counselor-added steps are always **preserved** — regenerating the roadmap for a new destination never wipes out what's already been done.

9. Student's day-to-day

Once a student has an account and has taken at least one test, they can:

- View **Career Matches** — a ranked list of careers fitted to their profile.
- Open their **Roadmap** and track progress.
- Check their **Assessments** screen to start assigned tests or view past reports.
- Book appointments, compare careers/universities, explore colleges and scholarships, and message their counselor.

10. Quick-run demo script (3 minutes)

- 1 Sign in as the **Org Admin**.
- 2 Open **Students** — show the list and the **Import CSV / Invite** buttons.
- 3 Generate an **invite link** for a student and explain it expires in 7 days.
- 4 Switch to a **Counselor** account.
- 5 Open **Assign Test**, pick a student and the **Stream Selector**, generate the link.

- 6 Open the **Roadmap** for a student — show the milestones, the India/Abroad toggle, and the counselor "add a step".
- 7 Explain that as tests are completed, career matches get richer.

Appendix — The access/token model at a glance

Link type	Purpose	Expires	Notes
Invitation link	Student sets their own password	7 days	Single-use; replaced if expired
Test link	Student opens & takes a test	Never	Re-opening shows the current result if already finished

Trust & control: Student data is isolated per organization. Counselors only see students assigned to them. Tests are always counselor-assigned — students can't self-assign. All pricing/subscription limits are enforced per organization.
